Subject Fw: Dioxin cleanup criteria

Below is the dioxin question, and I support it as 20 ppb is consistent with EPA's (dioxin cleanup criteria) guidance for commercial properties.

Subject Dioxin cleanup criteria

The dioxin number that we apply in NJ is a maximum of 20 ppb allowed to remain on site beneath a cap, regardless of depth. I have asked our tech support team whether there is a way to enhance remediation measures or otherwise justify higher concentrations to remain on-site. I'll keep you informed. What is your initial reaction to expanding ther hot spot removal to reach the 20ppb target?
